Project idea description

For the course project, we are designing a database management system for a **Football Club.** Football club has the following attributes: Fcid, name, year established, nickname, city represented and league degree. It must has one Home Stadium with the following attributes: Hsid, name, capacity, location and ticket price. The club can win trophies with attributes: name and year.

Employees who work with the football club has attributes: Eid, name, phone number, DOB, address and salary. Players are types of employees with shirt number and position. Coach is an employee who coaches the player. Doctors are employees who treats injured players. Full-Time players are type of players with contract period. Loan players are type of players with loan period and has a club which is loaned from.
